Hi Jason,

As you probably know, we're adding another pod to the library storage facility site and in doing so we're re-evaluating network connectivity options. These include continuing on Spectrum, connecting to existing nearby 3rd party fiber, or running new fiber over to the LSF site.

We heard that the town is also building over there and is likely doing the same evaluation. I think it would be great if we could compare notes and see what opportunities for collaboration exist. At the very least we can explore options together and make better decisions because of that. My hope is that there might be even more to gain.

Jason, does this sound like something about which we could put our heads together? If so, who should we bring together?

Thank you,

-Barron
